## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/23/2008 has been entered.

### EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: **Non-Elected claims 9-22, 24-25 and 27-28** are cancelled.

### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: **Independent claim 29** recites the uniquely distinct features for "an information button operable to input auxiliary information indicating a degree of importance of digital data, according to user operation; a selection unit operable to select an instruction of how to record the auxiliary information for (i) an important scene, (ii) a change of shooting location, and (iii) a predetermined time; and a digital data generation device operable to combine, at

a time when the auxiliary information is input and the image is captured and photoelectrically converted into the image signal by said imaging unit, the auxiliary information received at the time with the first digital data corresponding to the image captured and photoelectrically converted by said imaging unit at the time, according to the instruction selected by the selection unit, to produce second digital data comprising the combined auxiliary information and first digital data, and output the second digital data to a recording device or a transmission device"; **Independent claim 35** recites the uniquely distinct features for "receiving an auxiliary information input indicating a degree of importance of digital data, via an information button according to user operation; selecting an instruction of how to record the auxiliary information for (i) an important scene, (ii) a change of shooting location, and (iii) a predetermined time; combining, at a time of said receiving of the auxiliary information and of said capturing and photoelectrically converting the image into the image signal, the auxiliary information received at the time with the first digital data corresponding to the image captured and photoelectrically converted, at the time, by said capturing and photoelectrically converting, according to the selected instruction, to produce second digital data comprising the combined auxiliary information and first digital data and outputting the second digital data to a recording device or a transmission device."; and **Independent claim 36** recites the uniquely distinct features for "receiving an auxiliary information input indicating a degree of importance of digital data, via an information button according to user operation; selecting an instruction of how to record the auxiliary information for (i) an important scene, (ii) a change of shooting location, and (iii) a

predetermined time; combining, at a time of said receiving of the auxiliary information and of said capturing and photoelectrically converting the image into the image signal, the auxiliary information received at the time with the first digital data corresponding to the image captured and photoelectrically converted, at the time, by said capturing and photoelectrically converting, according to the selected instruction, to produce second digital data comprising the combined auxiliary information and first digital and outputting the second digital data to a recording device or a transmission device". The closest prior art, Anderson (US 6,538,698), Sampsell (US 6,614,988), Ebisawa (US 6,449,422), Anderson (5,903,309), Funazaki (US 5,561,531) and Parulski et al (US 6,629,104) disclose inventions that allows for additional information to be input by a user before the capturing and conversion of the optical image or the edition of auxiliary information after the capturing and conversion of the optical image, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
